Expedition Overview

Why the North Side?

The North Side offers a rich history, from early British expeditions to the first Chinese summit in 1960. Our chosen route follows the Northeast Ridge, which presents fewer hazards compared to the South, avoiding the dangers and the crowd of Khumbu Icefall, with the primary challenges found in the rocksteps leading to the summit.

Express Expedition

The 23 days tinerary balances necessary acclimatization, training, and summit preparation while minimizing downtime through advanced planning. Our use of cutting-edge technology such as guidance for pre-acclimatization systems, efficient oxygen use, and pre-set mountain camps enhances summit success and reduces risks. With the majority of climbers from other teams oftengoing home before their summit attempt due to fatigue or extended acclimatization, our streamlined approach keeps climbers strong and prepared for the summit push.

Difficulty

Participants must be experienced in technical climbing and prepared for the challenges of high-altitude camp life. A high level of fitness and the ability to perform over several days at altitude are essential. Previous experience on 8,000m peaks or multiple successful climbs of 6,000-7,000m peaks is required.

At 14 Peaks Expeditions, we pride ourselves on having the most experienced support team in the industry. Our Sherpas, guides, and staff are comprised of multiple-time Everest summiters with extensive knowledge of the North Side. Their unparalleled expertise ensures that climbers can tackle this challenge safely and successfully. With our dedicated crew who have summited Everest several times and excel in operating in this demanding environment—our North Side ascents provide a safer and more focused approach for achieving summit success.
